- You have no Technical Co-Founder (causing you delays in launching your beta)
- CTO are not full-stack developers (which requires expensive and hard-to-find multi-skills engineers)
- Engineers are nomadic (it takes 90 days to find qualified talents, causing delays in releases)
- Qualified Engineer cost over \$15k a month with no guarantee they would deliver a Beta in 90 days
- Early investors want assurances that a scalable beta will make it to the market place within 90 days
- Our Accelerator require a working Beta by graduation date for Innovate, and Pre-enrollment for Launch

You have two options:

Do it Your Self

- No Guarantee Delivery in 60 days*
- Cost over \$50k*/3 month Engineering
- Built with Non-Scalable Architecture
- You would share ownership with CTO
- You pay more to run it In-house

Use Our Private Beta Package

- Guarantee Delivery in 60 days*
- Cost less then 1 month Engineer
- Built with Scalable Architecture
- You have total IP ownership
- We can run it until you get CTO

Our Technology Labs Partners already built several successful startups, i.e.: Quickoffice (**acquired by Google**) and CloudOn (**acquired by DropBox**), among 100's of other project for VC backed startups. Among VC portfolio client startups are: Cisco, Intel, Menlo Ventures, Tenet Healthcare, Mayfield Fund, Foundation Capital, and much more. Additional References are available upon request for all Public Beta Order. *Public Beta Package require 4 months with custom development and billing.
